

Small Brush Plate

Discreet low voltage cable pass through for simple cable runs.

Sold in Contractor packs of 10, or sold separately.

The Small Brush Plate allows the installer to easily pass a single wire or small group of wires through the wall and still maintain a clean professional appearance.

Simply fasten the brush insert to the surface you wish to pass the wire through, and snap the face plate into place. The insert can be screwed directly onto the surface or simply attached with double sided tape.

No low voltage ring required!

Small Brush Plate, Contractor Pack of 10, No Screw Hardware

Part Number	Color
